Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carfagna et al (6,779,976 B1).

Carfagna et al disclose an air purifier (20) mounted on the leading edge (508) of a fan paddle (502) comprising a self-supporting framework (20), a filter medium (22) assembled to the framework, means on the framework for releasably mounting the filter medium to the leading edge (508) of the fan paddle (502) (see Figs. 2, 4 and 5).

Carfagna et al further disclose the framework is formed of a material (22) that retains a shape to which it is bent, the purifier is assembled with the second surface of the filter medium in contact with the framework (see details of item 22 in Fig. 4). Carfagna et al also disclose the air purifier to straddle a leading edge of a fan paddle comprising adhesive means (col. 4, lines 39-40), the filter medium having one side configured to entrap particles in the ambient air (col. 4, lines 39-48) and the filter medium being electrostatically charged (col. 1, lines 40-41). Claims 1-17 differ from the disclosure of Carfagna et al in that the structure of the filter medium having a symmetrical array of connected panels or irregular shape. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide the shape of the filter medium in a symmetrical array of connected panels or irregular shape or any other

desired shape since it is well settled that mere change of shape without affecting the function of the part would have been an obvious design modification. See Eskimo Pie Corp v. Levous et al 3 USPQ 23.
